

# WIRELESS INTRUSION DETECTION

-  Detect threats before they get close with an effective range up to 10km.
-  Pinpoint intruder locations and track movement live.
-  Completely wireless, buried sensors with a small footprint are nearly invisible.
-  Human footstep detection up to 10 meters and off-road vehicle detection up to 25 meters.

### **Integrated Tracking**

Pathfinder can integrate with ground and air-based camera systems to put eyes on target as an automated “slew to cue” or “fly to cue” capability.

### **Undetectable**

With only the antenna exposed, Pathfinder is undetectable to the human eye and its short burst radio signal is hidden in the noise.

### **User-friendly**

Simple wireless architecture and built-in battery allows for easy installation and long working life.
